≡   Documents: Head and body

consistent with this. But you must make sure that the `title` and other `head` p

any paragraphs, lists, images, or other `body` parts.

> *You might see older HTML documentation that says these tags are required. This w*
> *older version of HTML. Today's browsers use HTML5, which does not require them.*

In the next lesson, you will learn much more about how the browser understands

pages, as you learn about Cascading Style Sheets.

Update your notes!

Now that you know about the `<html>`, `<head>`, and `<body>` element

to your notes file.

Everything in your page should fit into this overall structure:

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <title>Title of your page</title>
  </head>
  <body>
    Content goes here! (Things like paragraphs, links,
  </body>
</html>
```

You may also want to describe these elements a little. What are some exa

things that you might put in the `<head>`? How about the `<body>`? And

go inside the `<html>` element?

Which of these things are required?

☐   I've added `<html>`, `<head>`, and `<body>` elements t
    file.

☐   I've saved the file and opened it in my browser, to make
    works.
